PROJECTS

Data Grid

Front-end

- Used React library with TypeScript to develop the application.
- Designed UI with Tailwind CSS.
- Managed state with Jotai.
- Managed API calls with Axios.
- Handled JWT and localStorage for authentication.
- Designed data tables for API display, focusing on code reusability.

Back-end

- Built RESTful APIs using Fastify and TypeScript, integrating MySQL through Prisma, and managed databases with Docker Compose.
- Implemented JWT and Bearer Token for secure authentication.
- Configured schema validation and CORS for secure client-server communication.

Global Time & Temperature

Front-end

- Used React library with TypeScript to develop the application.
- Designed UI with Tailwind CSS.
- Managed state with Redux.
- Managed API calls with Axios.
- Handled JWT and localStorage for authentication.
- Integrated Weather API for weather information.

Back-end

- Designed and configured a PostgreSQL database
- Utilizing Docker Compose for containerized deployment and simplified environment management.
- Developed RESTful APIs with Java Spring Boot for CRUD operations, authentication, and JWT security.
- Utilized BCrypt for data encryption.
- Managed Record usage and pagination.
- Generated API documentation with Swagger.
